

OknitechEcom - Development Specification for Aniket

Objective: Build a reusable white-label Single Vendor E-commerce platform. This document is intentionally concise so the logic can be directly given to Cursor.

1. Next.js Web Application Pages

Home

- Purpose: Landing page with banners, featured categories/products, offers, brands.
- Mention required APIs while implementing.

Shop

- Purpose: Product listing with filters, sorting and pagination.
- Mention required APIs while implementing.

Category

- Purpose: Products under selected category.
- Mention required APIs while implementing.

Brand

- Purpose: Products by brand.
- Mention required APIs while implementing.

Search

- Purpose: Search products with filters.
- Mention required APIs while implementing.

Product Details

- Purpose: Gallery, variants, reviews, wishlist, cart, buy now.
- Mention required APIs while implementing.

Cart

- Purpose: Manage cart items.
- Mention required APIs while implementing.

Checkout

- Purpose: Address, shipping, coupon and payment.
- Mention required APIs while implementing.

Order Success

- Purpose: Payment success summary.
- Mention required APIs while implementing.

Order Failed

- Purpose: Payment failure page.

- Mention required APIs while implementing.

Login

- Purpose: Customer login.
- Mention required APIs while implementing.

Register

- Purpose: Customer registration.
- Mention required APIs while implementing.

Forgot Password

- Purpose: Password reset.
- Mention required APIs while implementing.

Profile

- Purpose: Manage profile.
- Mention required APIs while implementing.

Addresses

- Purpose: Manage addresses.
- Mention required APIs while implementing.

My Orders

- Purpose: Order history.
- Mention required APIs while implementing.

Order Details

- Purpose: Invoice, tracking and status.
- Mention required APIs while implementing.

Wishlist

- Purpose: Saved products.
- Mention required APIs while implementing.

Notifications

- Purpose: Customer notifications.
- Mention required APIs while implementing.

Contact

- Purpose: Contact form.
- Mention required APIs while implementing.

FAQ

- Purpose: Frequently asked questions.
- Mention required APIs while implementing.

Privacy Policy

- Purpose: CMS page.
- Mention required APIs while implementing.

Terms & Conditions

- Purpose: CMS page.
- Mention required APIs while implementing.

2. Laravel Bootstrap Admin Modules

Dashboard

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Products

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Categories

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Brands

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Orders

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Customers

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.

- Activity logging.

Coupons

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Reviews

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Banners

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

CMS Pages

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Menus

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Shipping

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Payment Gateways

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Taxes

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Reports

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Notifications

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Settings

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Roles & Permissions

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

Audit Logs

- CRUD operations where applicable.
- Search, filter, pagination, bulk actions.
- Status enable/disable.
- Activity logging.

3. Laravel API Controllers

AuthController

- register()
- Route: POST /api/auth/register
- Logic: Register customer and send verification.
- login()
- Route: POST /api/auth/login

- Logic: Authenticate and issue Sanctum token.
- logout()
- Route: POST /api/auth/logout
- Logic: Revoke token.
- profile()
- Route: GET /api/me
- Logic: Return logged in user.
- updateProfile()
- Route: PUT /api/me
- Logic: Update customer profile.
- forgotPassword()
- Route: POST /api/auth/forgot-password
- Logic: Send reset link.
- resetPassword()
- Route: POST /api/auth/reset-password
- Logic: Reset password.

ProductController

- index()
- Route: GET /api/products
- Logic: Return paginated products with filters.
- show()
- Route: GET /api/products/{slug}
- Logic: Return complete product details.
- featured()
- Route: GET /api/products/featured
- Logic: Featured products.
- latest()
- Route: GET /api/products/latest
- Logic: Latest products.
- related()
- Route: GET /api/products/{id}/related
- Logic: Related products.
- search()
- Route: GET /api/products/search
- Logic: Search products.

CategoryController

- index()
- Route: GET /api/categories
- Logic: List categories.
- show()

- Route: GET /api/categories/{slug}
- Logic: Category details with products.

CartController

- index()
- Route: GET /api/cart
- Logic: Customer cart.
- store()
- Route: POST /api/cart
- Logic: Add product.
- update()
- Route: PUT /api/cart/{id}
- Logic: Update quantity.
- destroy()
- Route: DELETE /api/cart/{id}
- Logic: Remove item.
- clear()
- Route: DELETE /api/cart
- Logic: Clear cart.

CheckoutController

- summary()
- Route: POST /api/checkout/summary
- Logic: Calculate totals, taxes and shipping.
- placeOrder()
- Route: POST /api/orders
- Logic: Create order.
- paymentSuccess()
- Route: POST /api/payment/success
- Logic: Verify payment and mark paid.
- paymentFailed()
- Route: POST /api/payment/failed
- Logic: Handle failed payment.

OrderController

- index()
- Route: GET /api/orders
- Logic: Customer orders.
- show()
- Route: GET /api/orders/{id}
- Logic: Single order.
- cancel()
- Route: POST /api/orders/{id}/cancel

- Logic: Cancel eligible order.
- track()
- Route: GET /api/orders/{id}/track
- Logic: Track via Delhivery.

WishlistController

- index()
- Route: GET /api/wishlist
- Logic: Wishlist items.
- store()
- Route: POST /api/wishlist
- Logic: Add item.
- destroy()
- Route: DELETE /api/wishlist/{id}
- Logic: Remove item.

CouponController

- validateCoupon()
- Route: POST /api/coupon/validate
- Logic: Validate coupon.

ReviewController

- index()
- Route: GET /api/products/{id}/reviews
- Logic: Product reviews.
- store()
- Route: POST /api/products/{id}/reviews
- Logic: Create review.

DelhiveryController

- serviceability()
- Route: GET /api/delhivery/serviceability
- Logic: Check pincode.
- createShipment()
- Route: POST /api/delhivery/shipment
- Logic: Create shipment.
- trackShipment()
- Route: GET /api/delhivery/track/{awb}
- Logic: Track shipment.
- cancelShipment()
- Route: POST /api/delhivery/cancel
- Logic: Cancel shipment.

4. React Native App Screens

- Splash
- Onboarding
- Login
- Register
- Home
- Categories
- Search
- Product Details
- Wishlist
- Cart
- Checkout
- Payment
- My Orders
- Order Details
- Track Order
- Profile
- Addresses
- Notifications
- Settings
- Contact Support

5. Development Notes

- Keep APIs reusable for Web and Mobile.
- Use repository/service pattern where beneficial.
- White-label branding from database settings.
- All responses should follow a common JSON structure.
